## Corporate Push Email Solutions

Push email is simple.  
It's all about better customer service.

As competitive pressure increases, the quality of your customer service determines success or failure. Your response times and information management must be consistently excellent. Without an integrated mobile solution in place, the chances are that you are starting well behind your competitors.

Business adoption of mobile email has grown dramatically in the last year and it is now regarded as an essential part of information services. EMCC has been involved in the development of solutions designed for the following email servers:

- Microsoft Exchange
- IBM Lotus Domino
- Oracle Collaboration Suite
- Novell Groupwise

EMCC provides development services that enable enterprises to extend their corporate IT services often including critical business

applications into the mobile space. These solutions are based around a variety of email services including:

- ActiveSync
- Intellisync
- BlackBerry Connect
- m-Sync

EMCC has extensive experience of developing solutions for Symbian handsets that utilise Exchange ActiveSync from Microsoft.

BlackBerry Connect is the push email service available to BlackBerry licensees. EMCC played a leading role in integrating this service onto Sony Ericsson's UIQ handsets. In addition EMCC offers development options around the BlackBerry Mobile Data Service (MDS) that enables BlackBerry Enterprise Server users to extend applications onto mobile handsets

Nokia's Intellisync solution can be integrated to a wide range of servers with additional development options available from EMCC.

In conjunction with Oracle, EMCC has created m-Sync, a push email solution that interacts with Oracle Collaboration Suite and handsets such as Nokia's Eseries devices.
